

Akshit Jain

+91 7011070209 | akshitjain20048@gmail.com | github.com/Akshit-ja | coomunicateakshit.vercel.app

Skills

Python, LLM, RAG, NLP, FastAPI, Redis, PostgreSQL, Docker, SQL, MongoDB, Git, JavaScript, C/C++

Experience

Post LLM Training Intern, Ethara AI – Gurugram Feb 2026 – May 2026

- Improved LLM response reliability using Reinforcement Learning from Human Feedback (RLHF) evaluation workflows and prompt correction techniques
- Performed structured annotation and response validation across enterprise-scale AI training pipelines to improve model alignment quality
- Containerized AI workflow deployments using Docker and maintained collaborative version control pipelines with Git

AI and ML Intern, Motherson Technology Services Limited May 2025 – July 2025

- Increased patent retrieval accuracy by 80% by building a Retrieval-Augmented Generation (RAG) conversational assistant
- Integrated Large Language Models into enterprise NLP workflows for intelligent document understanding
- Engineered prompt optimization pipelines to improve AI response coherence for complex enterprise queries
- Improved object detection dataset quality by annotating and validating 1000+ training images using Roboflow

Projects

Resume AI Generator | Next.js, FastAPI, Google Gemini, PostgreSQL, Docker

- Built an AI-powered resume optimization platform using Google Gemini, FastAPI, and Next.js to tailor resumes to job descriptions
- Developed ATS-aware resume analysis and interview question generation pipelines using LLM-based workflows
- Engineered secure backend infrastructure with JWT authentication, PostgreSQL, and Redis-based rate limiting
- Deployed containerized microservices using Docker with Prometheus and Grafana monitoring

GrievTech | FastAPI, Streamlit, Scikit-learn, XGBoost, Pandas, Plotly

- Architected an intelligent public grievance platform using FastAPI and Streamlit to modernize complaint management and enable real-time analytics
- Implemented machine learning classification models using Scikit-learn and XGBoost to predict complaint risk levels and automate escalation routing
- Built interactive performance dashboards with Plotly to visualize complaint trends, risk distributions, and system metrics for governance authorities
- Designed a data drift and anomaly detection pipeline using Pandas and NumPy to identify unusual complaint patterns and trigger model retraining alerts

Distributed Task Queue | FastAPI, Celery, PostgreSQL, Redis, Docker

- Architected a scalable distributed task queue using FastAPI, Celery, Redis, and PostgreSQL to execute and monitor asynchronous background operations
- Developed horizontal scaling capabilities and configurable retry policies to maintain reliable message brokering and task execution
- Containerized the service architecture using Docker and Docker Compose to streamline local development and production deployments
- Built comprehensive monitoring endpoints and real-time queue tracking to evaluate system health and worker performance

Education

Amity University, Noida

2022 – 2026

Bachelor of Technology, Information Technology

7.34
