

Akshith Jain

+91 7011070209 | akshithjain20048@gmail.com | github.com/Akshith-jain | coomunicateakshith.vercel.app

Skills

Python, FastAPI, Redis, PostgreSQL, Docker, Celery, SQL, MongoDB, Git, JavaScript, NLP, RAG, LLM

Experience

Post LLM Training Intern, Ethara AI – Gurugram

Feb 2026 – May 2026

- Refined language model outputs by applying Reinforcement Learning from Human Feedback techniques to evaluate and correct prompt accuracy
- Maintained training data integrity by conducting structured annotation, categorization, and quality validation across enterprise AI pipelines
- Containerized application builds using Docker and managed continuous code integration via Git to accelerate technical project deployments

AI and ML Intern, Motherson Technology Services Limited

May 2025 – July 2025

- Increased enterprise patent retrieval accuracy by 80 percent by architecting a real-time conversational bot using Retrieval-Augmented Generation
- Advanced intelligent document understanding capabilities by integrating large language models into existing natural language processing pipelines
- Improved object detection model precision by classifying and annotating over 1000 training images within Roboflow
- Optimized automated response coherence by engineering structured prompts for complex data queries

Projects

Distributed Task Queue | FastAPI, Celery, PostgreSQL, Redis, Docker

- Designed a scalable distributed task queue architecture using FastAPI, Celery, Redis, and PostgreSQL for asynchronous processing and fault-tolerant system design
- Implemented retry orchestration and worker scaling strategies for reliable background task execution and high availability
- Containerized distributed services using Docker and Docker Compose for streamlined deployment workflows and cloud infrastructure management
- Built monitoring and queue observability endpoints to track worker health, system performance, and data processing metrics

Resume AI Generator | Next.js, FastAPI, Google Gemini, PostgreSQL, Docker

- Architected an AI-driven optimization platform using Next.js, FastAPI, and Google Gemini to automatically tailor user resumes based on specific job descriptions and requirements
- Developed a secure backend system with JSON Web Tokens, PostgreSQL, and Redis caching to enforce API rate limits, track user token budgets, and ensure data security
- Containerized the full stack architecture using Docker and configured Prometheus and Grafana monitoring to maintain high availability, scalability, and system reliability
- Implemented Application Tracking System validation, data mining, and targeted interview question generation capabilities to improve candidate job matching success and user experience

GrievTech | FastAPI, Streamlit, Scikit-learn, XGBoost, Pandas, Plotly

- Architected an intelligent public grievance platform using FastAPI and Streamlit to modernize complaint management, enable real-time analytics, and leverage data-driven insights
- Implemented machine learning classification models using Scikit-learn and XGBoost to predict complaint risk levels, automate escalation routing, and optimize system workflows
- Built interactive performance dashboards with Plotly to visualize complaint trends, risk distributions, system metrics, and network architecture for governance authorities and stakeholders
- Designed a data drift and anomaly detection pipeline using Pandas and NumPy to identify unusual complaint patterns, trigger model retraining alerts, and ensure continuous system improvement

Education

Amity University, Noida

2022 – 2026

Bachelor of Technology, Information Technology

7.34
