

Akshit Jain

+91 7011070209 | akshitjain20048@gmail.com | github.com/Akshit-ja | coomunicateakshit.vercel.app

Skills

Python, FastAPI, Redis, PostgreSQL, Docker, Celery, SQL, MongoDB, Git, JavaScript, NLP, RAG, LLM

Experience

Post LLM Training Intern, Ethara AI – Gurugram

Feb 2026 – May 2026

- Refined language model outputs by applying Reinforcement Learning from Human Feedback techniques to evaluate and correct prompt accuracy
- Maintained training data integrity by conducting structured annotation, categorization, and quality validation across enterprise AI pipelines
- Containerized application builds using Docker and managed continuous code integration via Git to accelerate technical project deployments

AI and ML Intern, Motherson Technology Services Limited

May 2025 – July 2025

- Increased enterprise patent retrieval accuracy by 80 percent by architecting a real-time conversational bot using Retrieval-Augmented Generation
- Advanced intelligent document understanding capabilities by integrating large language models into existing natural language processing pipelines
- Improved object detection model precision by classifying and annotating over 1000 training images within Roboflow
- Optimized automated response coherence by engineering structured prompts for complex data queries

Projects

Distributed Task Queue | FastAPI, Celery, PostgreSQL, Redis, Docker

- Owned the design and implementation of a scalable distributed task queue architecture using FastAPI, Celery, Redis, and PostgreSQL for high-throughput asynchronous processing
- Developed and executed retry orchestration and worker scaling strategies to ensure reliable background task execution and minimize latency
- Containerized distributed services using Docker and Docker Compose to streamline deployment workflows and enhance system maintainability
- Built and deployed monitoring and queue observability endpoints to track worker health, system performance, and inform data-driven optimization decisions

Resume AI Generator | Next.js, FastAPI, Google Gemini, PostgreSQL, Docker

- Architected and led the development of an AI-driven optimization platform using Next.js, FastAPI, and Google Gemini to rapidly tailor user resumes based on specific job descriptions
- Designed and implemented a secure backend system with JSON Web Tokens, PostgreSQL, and Redis caching to enforce API rate limits, track user token budgets, and ensure high availability
- Containerized the full stack architecture using Docker and configured Prometheus and Grafana monitoring to maintain high system uptime and inform data-driven decisions
- Developed and integrated Application Tracking System validation and targeted interview question generation capabilities to drive candidate job matching success and improve hiring outcomes

GrievTech | FastAPI, Streamlit, Scikit-learn, XGBoost, Pandas, Plotly

- Owned the architecture and development of an intelligent public grievance platform using FastAPI and Streamlit to modernize complaint management, enable real-time analytics, and drive process improvements
- Designed and implemented machine learning classification models using Scikit-learn and XGBoost to predict complaint risk levels, automate escalation routing, and minimize manual intervention
- Built and deployed interactive performance dashboards with Plotly to visualize complaint trends, risk distributions, and system metrics, and inform data-driven decision making for governance authorities
- Developed and integrated a data drift and anomaly detection pipeline using Pandas and NumPy to identify unusual complaint patterns, trigger model retraining alerts, and ensure high model accuracy

Education

Amity University, Noida

2022 – 2026

Bachelor of Technology, Information Technology

7.34
