

Akshit Jain

+91 7011070209 | akshitjain20048@gmail.com | github.com/Akshit-ja | coomunicateakshit.vercel.app

Skills

C/C++, JavaScript, Python, LLM, RAG , NLP, FastAPI, SQL, MongoDB (Databases), Git, Docker

Experience

Post LLM Training Intern, Ethara AI – Gurugram Feb 2026 – May 2026

- Refined language model outputs by applying Reinforcement Learning from Human Feedback techniques to evaluate and correct prompt accuracy
- Maintained training data integrity by conducting structured annotation, categorization, and quality validation across enterprise AI pipelines
- Containerized application builds using Docker and managed continuous code integration via Git to accelerate technical project deployments

AI and ML Intern, Motherson Technology Services Limited May 2025 – July 2025

- Increased enterprise patent retrieval accuracy by 80 percent by architecting a real-time conversational bot using Retrieval-Augmented Generation
- Advanced intelligent document understanding capabilities by integrating large language models into existing natural language processing pipelines
- Improved object detection model precision by classifying and annotating over 1000 training images within Roboflow
- Optimized automated response coherence by engineering structured prompts for complex data queries

Projects

Distributed Task Queue | FastAPI, Celery, PostgreSQL, Redis, Docker

- Owned the architecture and development of a scalable distributed task queue, leveraging FastAPI, Celery, Redis, and PostgreSQL to drive asynchronous background operations and ensure rapid execution
- Designed and implemented horizontal scaling capabilities and configurable retry policies to maintain reliable message brokering, task execution, and high system availability
- Containerized the service architecture using Docker and Docker Compose, streamlining local development and production deployments for improved scalability and maintainability
- Built and deployed comprehensive monitoring endpoints and real-time queue tracking, enabling data-driven decision making and optimizing system health and worker performance

Resume AI Generator | Next.js, FastAPI, Google Gemini, PostgreSQL, Docker

- Spearheaded the development of an AI-driven optimization platform using Next.js, FastAPI, and Google Gemini, delivering personalized resume tailoring and rapid job matching capabilities
- Developed a secure and scalable backend system with JSON Web Tokens, PostgreSQL, and Redis caching, enforcing API rate limits and tracking user token budgets to ensure high product impact
- Containerized the full stack architecture using Docker and configured Prometheus and Grafana monitoring, maintaining high availability and scalability across all services and ensuring rapid issue resolution
- Implemented Application Tracking System validation and targeted interview question generation capabilities, driving improved candidate job matching success and product adoption

GrievTech | FastAPI, Streamlit, Scikit-learn, XGBoost, Pandas, Plotly

- Led the architecture and development of an intelligent public grievance platform using FastAPI and Streamlit, modernizing complaint management and enabling real-time analytics and data-driven decision making
- Designed and implemented machine learning classification models using Scikit-learn and XGBoost, predicting complaint risk levels and automating escalation routing for improved product impact and user experience
- Built and deployed interactive performance dashboards with Plotly, visualizing complaint trends, risk distributions, and system metrics for governance authorities and stakeholders
- Developed a data drift and anomaly detection pipeline using Pandas and NumPy, identifying unusual complaint patterns and triggering model retraining alerts for continuous product improvement

Education

Amity University, Noida

Bachelor of Technology, Information Technology

2022 – 2026

7.34
