

Akshit Jain

+91 7011070209 | akshitjain20048@gmail.com | github.com/Akshit-ja | coomunicateakshit.vercel.app

Skills

C/C++, JavaScript, Python, LLM, RAG , NLP, FastAPI, SQL, MongoDB (Databases), Git, Docker

Experience

Post LLM Training Intern, Ethara AI – Gurugram

Feb 2026 – May 2026

- Refined language model outputs by applying Reinforcement Learning from Human Feedback techniques to evaluate and correct prompt accuracy
- Maintained training data integrity by conducting structured annotation, categorization, and quality validation across enterprise AI pipelines
- Containerized application builds using Docker and managed continuous code integration via Git to accelerate technical project deployments

AI and ML Intern, Motherson Technology Services Limited

May 2025 – July 2025

- Increased enterprise patent retrieval accuracy by 80 percent by architecting a real-time conversational bot using Retrieval-Augmented Generation
- Advanced intelligent document understanding capabilities by integrating large language models into existing natural language processing pipelines
- Improved object detection model precision by classifying and annotating over 1000 training images within Roboflow
- Optimized automated response coherence by engineering structured prompts for complex data queries

Projects

Distributed Task Queue | FastAPI, Celery, PostgreSQL, Redis, Docker

- Owned the architecture and development of a scalable distributed task queue, leveraging FastAPI, Celery, Redis, and PostgreSQL to drive rapid execution of asynchronous background operations
- Designed and implemented horizontal scaling capabilities and configurable retry policies, ensuring reliable message brokering and task execution with high availability
- Containerized the service architecture using Docker and Docker Compose, streamlining local development and production deployments for seamless scalability
- Built and deployed comprehensive monitoring endpoints and real-time queue tracking, enabling data-driven evaluation of system health and worker performance

Resume AI Generator | Next.js, FastAPI, Google Gemini, PostgreSQL, Docker

- Spearheaded the development of an AI-driven optimization platform, utilizing Next.js, FastAPI, and Google Gemini to rapidly generate tailored user resumes based on specific job descriptions
- Designed and implemented a secure backend system with JSON Web Tokens, PostgreSQL, and Redis caching, enforcing API rate limits and tracking user token budgets to ensure high security and scalability
- Containerized the full stack architecture using Docker and configured Prometheus and Grafana monitoring, maintaining high availability and performance across all services
- Implemented Application Tracking System validation and targeted interview question generation capabilities, driving significant improvements in candidate job matching success and product impact

GrievTech | FastAPI, Streamlit, Scikit-learn, XGBoost, Pandas, Plotly

- Led the architecture and development of an intelligent public grievance platform, leveraging FastAPI and Streamlit to modernize complaint management and enable real-time analytics and rapid execution
- Implemented machine learning classification models using Scikit-learn and XGBoost, predicting complaint risk levels and automating escalation routing for improved product impact and scalability
- Built and deployed interactive performance dashboards with Plotly, providing governance authorities with actionable insights into complaint trends, risk distributions, and system metrics
- Designed and implemented a data drift and anomaly detection pipeline using Pandas and NumPy, identifying unusual complaint patterns and triggering model retraining alerts for continuous improvement and ownership

Education

Amity University, Noida

2022 – 2026

Bachelor of Technology, Information Technology

7.34
