

NESTOR DAVID VELASQUEZ LOPEZ

IT Support Specialist | Enterprise Systems Administration | Workflow Automation

Panama • ndvelasquezl@gmail.com • +507 6905-0014 • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Technical Support Specialist with 6+ years of experience supporting enterprise SaaS, cloud services, and API-based systems across multi-system environments. Known for user access administration, SQL-based troubleshooting, workflow automation, and 100% SLA compliance on critical incidents; experienced working with Product, Engineering, and DevOps.

CORE COMPETENCIES

help desk support, incident escalation, troubleshooting, SLA compliance, REST API troubleshooting, user provisioning, access management, Google Workspace, AWS Lambda, AWS S3, SQL, workflow automation, knowledge base authoring, and cross-functional collaboration.

PROFESSIONAL EXPERIENCE

BDG S.A. | *L3 Support Analyst* Aug 2025 – Apr 2026

- Administered and maintained enterprise SaaS business systems, ensuring continuous availability and data accuracy across integration workflows.
- Managed user access, configuration changes, and service account provisioning across enterprise systems, helping reduce access-related incidents through proactive administration.
- Performed root cause analysis using SQL, Coralogix, and Grafana for ~40 critical incidents/month, sustaining 100% SLA compliance while isolating system issues.
- Coordinated cross-functionally with Product, Engineering, and DevOps to implement permanent fixes and system improvements.
- Created health dashboards and KPI metrics for pipeline stability and system performance, giving stakeholders visibility into support trends and system health.
- Authored runbooks, post-mortem documents, and knowledge base articles, reducing recurring issue resolution time.
- Managed certificate renewals, data delivery configurations, and system health checks on a recurring schedule.

Jooycar | *L2/L3 Support Analyst* Sep 2021 – Sep 2025

- Supported 200+ enterprise accounts across SaaS platforms and API-based services, resolving escalated system and integration issues for business users.
- Built and maintained Zapier and n8n automations for data processing and alerting pipelines, reducing manual effort by 70% and improving support workflow efficiency.
- Validated large datasets with SQL to detect data quality issues; supported reporting needs for business and operations teams.
- Improved response times by 50% and reduced recurring incidents by 20% through structured solution documentation and repeatable playbooks.
- Troubleshoot REST API failures (authentication, payloads, rate limits) using Postman; escalated findings with full technical context to engineering.
- Built KPI dashboards using SQL to track CSAT, resolution times, and incident trends for management visibility.

Lean Tech | *Technical Support Analyst* Apr 2023 – Jun 2024

- Resolved 10–15 tickets per week for cloud-based SaaS products, maintaining 100% SLA compliance while supporting business-critical applications.
- Supported AWS S3 and Lambda integrations; diagnosed data ingestion and delivery pipeline failures end-to-end.

- Investigated API and SSO authentication failures, providing structured technical findings to engineering for resolution.
- Analyzed system logs and API responses to identify root causes and document solutions for the knowledge base.

Softensity Inc. | Helpdesk Specialist Aug 2020 – Aug 2021

- Provided end-user IT support for 50+ weekly tickets, maintaining a 95% customer satisfaction rating.
- Managed full user lifecycle: onboarding, offboarding, password resets, software provisioning, and access requests.
- Administered Windows Server environments and managed user account provisioning across internal systems.
- Built and maintained the company knowledge base, authoring guides for recurring issues and reducing repeat tickets by 20%.

EDUCATION

Associate Degree in Computer Engineering — Universidad Politécnica Territorial, Venezuela | 2013–2016
